Terms of sale

All prices herewith listed are VAT excluded.
Delivery terms: ex work our company.

AEROTECNICA COLTRI SPA reserves the right of amending the data contained
in this catalogue any time.

For full warranty coverage, all maintenance interventions, according to the scheduled maintenance table, or unforeseen failures must be carried out exclusively by personnel authorised by AEROTECNICA COLTRI. The manufacturer will be in charge of coordinating the assistance centres in the necessary interventions and the supply of spare parts.

The ordinary/annual maintenance envisaged in the use and maintenance manual remains the responsibility of the end user, after having attended the **COMPRESSOR OPERATOR COURSE** to be carried out in the Company.

All the components that can be replaced by the compressor operator are indicated in the table by a black number on a yellow field (example: **N**) all the other components are the responsibility of qualified technicians. To enrol in the compressor operator course, contact the technical assistance of **AEROTECNICA COLTRI** (service@coltri.com).

For each intervention in the timetable, performed by certified technical personnel, in addition to replacing the components according to the maintenance table, a complete examination is performed with a series of checks listed: High pressure fittings check; safety valve calibration or holding valve; non-return valve; check hoses; visual inspection of the pumping unit; belt wear; check for oil leaks; check intermediate pressures; oil pressure; direction of rotation; check emergency button; condensate purge key; stop key; hour counter; condensate drain timer; check refill time.

The machine is designed for constant use over time, therefore maintenance is normally based on an hourly schedule for the replacement of components subject to wear. If the machine is used occasionally or stopped for long periods, it is however advisable to replace the components listed above not beyond the indication given, even in the absence of use.

Any oil consumption during the replacement interval must be replenished using Coltri Oil, and it is the responsibility of the operator.
